

GENERAL INFORMATION

In addition to the standard SLC products shown below, AVX is now able to offer bordered versions in these same dielectric families as detailed on the opposing page utilizing micron resolution photolithography and etching processes.

With borders precisely defined, these parts will be beneficial in those applications that require enhanced visual definition during placement and wire bonding. Additionally, bordered devices have proven effective in reducing the susceptibility to conductive epoxy electrode bridging.

SLC's with double-sided borders, .010" & .012" square units and custom designs are available on request.
