EUP7910A

3.3V 600mA Low-Dropout Regulator

DESCRIPTION

The EUP7910A positive 3.3V voltage regulator features the ability to source 600mA of output current with a dropout voltage of 0.3V. A low quiescent current is provided. The typical quiescent current is 170 μ A.

Other features include ultra low dropout, high output accuracy, high PSRR, thermal shutdown and over current protection.

FEATURES

- Dropout voltage 0.3V @ $I_o=600\text{mA}$
- Output Current in Excess of 600mA
- Output Voltage Accuracy $\pm 2\%$
- Quiescent Current, Typically 170 μ A
- Stable with Ceramic Capacitor
- Short Circuit Current Limit
- Over Temperature Protection
- Available in SOT-89 Packages
- RoHS Compliant and 100% Lead (Pb)-Free

APPLICATIONS

- LDO Linear Regulator for Low-Voltage Digital IC
- PC Add-In Cards
- High Efficiency Linear Power Supplies
- Post Regulator

Typical Application Circuit

Application Note**External Capacitors**

Like any low-dropout regulator, the EUP7910A requires external capacitors for regulator stability. These capacitors must be correctly selected for good performance.

Input Capacitor

An input capacitance of 1 μ F is required between the EUP7910A input pin and ground (the amount of the capacitance may be increased without limit).

This capacitor must be located a distance of not more than 1cm from the input pin and returned to a clean analog ground. Any good quality ceramic, tantalum, or film capacitor may be used at the input.

If a tantalum capacitor is used at the input, it must be guaranteed by the manufacturer to have a surge current rating sufficient for the application.

There are no requirements for the ESR on the input capacitor, but tolerance and temperature coefficient must be considered when selecting the capacitor to ensure the capacitance will be 1 μ F over the entire operating temperature range.

Output Capacitor

The EUP7910A is designed specifically to work with very small ceramic output capacitors. A ceramic capacitor (temperature characteristics X7R, X5R, Z5U, or Y5V) in 2.2 to 10 μ F range with 5m Ω to 200m Ω ESR range is suitable in the EUP7910A application circuit.

The output capacitor must meet the requirement for minimum amount of capacitance and also have an ESR (Equivalent Series Resistance) value which is within a stable range (5m Ω to 200m Ω)

No-Load Stability

The EUP7910A will remain stable and in regulation with no external load. This is specially important in CMOS RAM keep-alive applications.
