

300mA Low-Noise LDO

Without Bypass Capacitor

DESCRIPTION

The EUP7913/A is an efficient CMOS low dropout (LDO) voltage regulator optimized for ultra-low-noise applications. It offers high output accuracy, extremely low dropout voltage, low ground current and fast start-up time. The EUP7913/A provides a very low noise output without a bypass capacitor, ideal for RF applications where a clean supply voltage source is required. Specifically designed for handheld and battery-powered devices, the EUP7913/A provides a TTL-logic-compatible enable pin. When the EUP7913/A is disabled, power consumption drops nearly to zero. Key features include current limit, thermal shutdown and faster transient response.

The EUP7913/A works with low-ESR ceramic capacitors. Available in the SOT23-3 or SOT23-5 space saving package which reduces the amount of board space necessary for power applications. The EUP7913/A offers wide fixed output voltage versions.

FEATURES

- 2.5V to 5.5V Input Voltage Range
- 30μV(rms) Output Noise
- 200mV Dropout @ 300mA
- 70dB PSRR at 1kHz No Bypass Capacitor
- Low 30μA Ground Current
- Guaranteed 300mA Output Current
- Stable with a 1μF Ceramic Output Capacitor When $V_{OUT} \geq 1.5V$, or 2.2μF when $V_{OUT} < 1.5V$
- Excellent Load/Line Transient
- Thermal Shutdown and Current Limit Protection
- Available 1.2V to 3.6V fixed output voltages (50mV increments)
- Space-Saving SOT23-3 & SOT23-5 Package
- RoHS Compliant and 100% Lead (Pb)-Free

APPLICATIONS

- Cellular Phones
- Camera Modules
- PDA and Palmtop Computers
- Consumer/Personal Electronics

Application Note

Input Capacitor

An input capacitance of 1 μ F or higher is required between the EUP7913/A input pin IN and ground (the amount of the capacitance may be increased without limit). This capacitor must be located a distance of not more than 1cm from the input pin and returned to a clean analog ground. Any good quality ceramic, tantalum, or film capacitor may be used at the input. If a tantalum capacitor is used at the input, it must be guaranteed by the manufacturer to have a surge current rating sufficient for the application. There are no requirements for the ESR on the input capacitor, but tolerance and temperature coefficient must be considered when selecting the capacitor to ensure the capacitance will be 1 μ F over the entire operating temperature range.

Output Capacitor

The EUP7913/A is designed specifically to work with very small ceramic output capacitors. A ceramic capacitor (temperature characteristics X7R or X5R) in 1 μ F to 10 μ F range with 5m Ω to 500m Ω ESR range is suitable in the EUP7913/A application circuit. The output capacitor must meet the requirement for minimum amount of capacitance to maintain good loop stability and phase margin. See the table below.

Output Voltage	Output Capacitor Minimum Value
1.2~1.45	2.2 μ F
1.5~3.6	1 μ F

No-Load Stability

The EUP7913/A is stable without any external load. This is specially important for CMOS RAM keep-alive applications.

On/Off Input Operation

The EUP7913A is turned off by pulling the EN pin low, and turned on by pulling it high. If this pin is floating, the regulator will always be on. To assure proper operation, the signal source used to drive the V_{EN} input must be able to swing above and below the specified turn-on/off voltage thresholds listed in the Electrical Characteristics. When EN is logic low, output is internally discharged to GND through a 500 resistor.
